

Center Support Bearings

BCA is your complete aftermarket partner.

BCA center support bearings are engineered to be a direct replacement for worn OE components. Many SUVs and trucks, as well as some passenger vehicles, use a driveshaft center support bearing to connect and support two sections of driveshaft. Driveshafts are precision components that are carefully balanced before a vehicle leaves the factory and these center support bearings help to absorb and isolate harmonic vibrations as the driveshafts rotate. Under normal operating conditions, these components will develop wear and eventually require replacement.

As your complete automotive aftermarket partner, BCA's growing product line includes hundreds of the most popular applications for driveshaft center support bearings.

BCA Center Support Bearing Features:

- Pre-lubricated and sealed bearing inserts prevent grease leakage while keeping moisture and contaminants out.
- High-quality rubber absorbs and isolates vibrations to extend bearing life.
- Cold-rolled steel construction increases strength and durability while a corrosion-resistant coating protects from environmental elements.
